

**Snapshot Response to
"Volcanoes: Nature's Incredible Fireworks"
by David L. Harrison**

1. What was the most interesting fact about volcanoes you learned from this Selection Snapshot?

Responses will vary but need to refer back to and give information from the Snapshot.

2. Your friend says, "I'm glad I live on the quiet, solid Earth." After reading this Snapshot, what can you tell your friend about Earth?

Model: Some of the Earth's layers are liquid. The liquid can come out of the earth through loud volcanoes. Also: the Earth's plates are constantly moving and can result in loud earthquakes.

3. How did you make sure that you understood the information about volcanoes as you read this?

Possible response: I stopped occasionally to ask myself questions and reread information I didn't understand.
